NANO RIPSTOP CANOPY

Nano Ripstop delivers twice the durability and strength at the same weight as traditional canopy material.

Nano ripstop is made of 55g/m² material with 3mm double ripstop pattern, which creates a smaller ripstop pattern making more cells per panel.

This material is then coated with a plasma treatment that creates a hydrophilic surface for superior adhesion of the coating onto the unfinished greige material.

This material was specifically engineered to increase strength and durability, giving you increased canopy rigidity for a better performing and lighter wing.
