POLAR

Polarizing sunglasses lenses (POLAR°Z) from Red Bull SPECT Eyewear offer optimal technology for both sports and everyday use. They minimize glare and maximize visibility by effectively eliminating reflected light from surfaces like water, snow, and asphalt. This allows for more precise perception of contrasts and colors, which is particularly crucial in fast-paced sports. Thanks to advanced filter technology, harmful UV rays are 100 % blocked, while the eyes are simultaneously protected from fatigue. Ideal for activities such as cycling, running, water sports, and winter sports, polarizing lenses provide unparalleled visual comfort, protection, and clarity in everyday life and under extreme conditions. Enjoy enhanced performance with style, clarity, and the safety of polarizing lenses.

I BOOST

The I°BOOST technology from Red Bull SPECT Eyewear revolutionizes visual quality for demanding athletes. Lenses with I°BOOST technology provide intense contrasts, brilliant colors, and razor-sharp vision that impresses in any environment. This technology maximizes the enjoyment of sports by ensuring clear and precise vision under changing light conditions.

SLC

Red Bull SPECT Eyewear's SLC (Seamless Lens Construction) technology revolutionizes eyewear design by seamlessly integrating lenses into the frame. This construction eliminates visible transitions, creating a sleek, modern look while improving aerodynamics and comfort. The seamless design reduces dirt and dust buildup, making the glasses easier to maintain and extending their lifespan. The SLC technology also offers enhanced stability and strength, with lenses more securely anchored in the frame, making the glasses particularly robust and resilient. The seamless construction provides a wide field of vision without obstructive frame edges, enhancing visual perception and safety. With SLC technology, Red Bull SPECT Eyewear sets new standards in design, functionality, and performance. Ideal for athletes and active individuals, this technology combines aesthetic excellence with practical benefits.

CHROM X

CHROM°X by Red Bull SPECT Eyewear features photochromic lenses that automatically adapt to changing light conditions. These innovative lenses respond to UV radiation, adjusting tint to shield the eyes from glare while ensuring clear vision. Especially effective in fluctuating light conditions, ChromX provides an additional and reliable protective function for the eyes during any sporting activity. Whether under bright sunshine or overcast skies, ChromX always offers the optimal tint for a comfortable viewing experience, perfect for dynamic athletes who need to quickly adapt to various environments. With ChromX lenses from Red Bull SPECT Eyewear, you're equipped for all lighting conditions, whether on a mountaintop, on the bike, or enjoying a leisurely walk in the woods.

WING DTS 2.0

WING DTS 2.0 from Red Bull SPECT Eyewear introduces an innovative approach to eyewear design by cleverly integrating dual temple elements within a single frame. Through an embedded sliding mechanism (dual temple system), a second, hidden temple extends elegantly to securely wrap around the ear. This sophisticated system is distinguished not only by its aesthetics but is also designed for optimal functionality, especially during intense physical activities. The additional temple provides enhanced support, stability, and protection, ensuring the glasses to stay securely in place even during dynamic movements. When the second temple is not needed, it can be easily retracted. WING DTS 2.0 sets new standards in versatility and adaptability of eyewear for various lifestyles.
